

Quick Start Guide

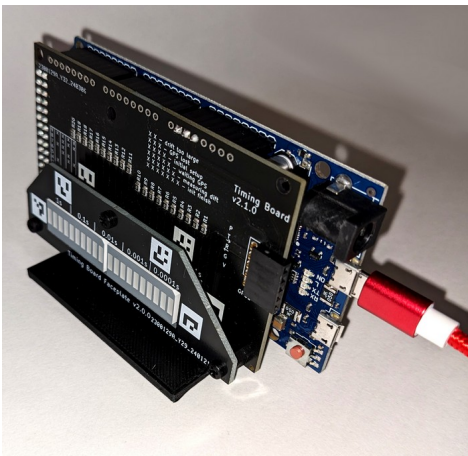

Step 1) Unpackage each component from their bags.

Step 2) Take the main board and put it in stand.

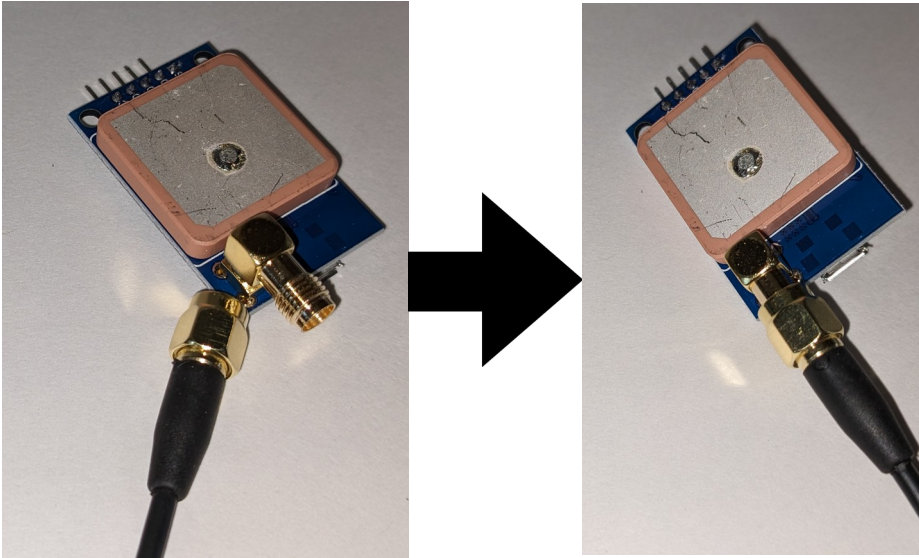

Step 3) Plug in micro USB cable at the board side. Leave Type A side unplugged until later.

(Continues on reverse side)

Step 4) Screw antenna cable to GPS component.

Step 5) Plug USB module into board. **IMPORTANT:** Make sure the module is oriented with tan ceramic, and antenna connector facing outward. You should see VCC, GND, TX, RX, PPS labels. Careful to not apply the wrong force to the GPS module and break the connector.

You may now line up your camera with lens at this instrument, when ready you can plug it in. For a video version of this document, and videos on how to use it visit:
